What we expect from you – Test-Task

Details

We know, test-tasks are time-consuming ..	- To do a test-task is a good measure to find the right software developer - We are sure, you have already done a lot of them .. - Quite a lot of time is needed, which you may not have - But: doing our test-task with the less possible effort, is waste of time, since our testers are very strict ☺ - So please show as the best work you can do, and we will appreciate it for sure – with an attractive remote job - **Thanks a lot in advance for your time and passion!**
Your Code	- We want to see how you code - So please do it by yourself, stay away from copy & paste
Please do testings	- If required do testings, within our test-task and before you sent it over to us
Comments	- We want to know, how and why you do the test-task in your way - Write in a separate file you thoughts, explain your approach and why you have chosen certain tools - And of course, comment within the code
And finally .. it should work	- The test-task shows us, how you code - And it is a prove, that a task given to you will finally work - For sure: it should work as described
